

Third Party Publishing

Third Party Publishing

Tabletop roleplaying games are about community, and Triangle Agency is no exception. We're always excited to see what happens when people bring their own perspectives and skills to the game and want to make sure those people can be compensated for their time.

The **Third Party Publishing License** lets you make things in the Triangle Agency world without having to get approval from us each time. If you follow and adhere to its terms, you are allowed to publish free or commercial material based upon and/or declaring compatibility with Triangle Agency without express permission from the designers or Haunted Table, LLC.

Third Party Publishing License

1. The mechanics and game rules of Triangle Agency may be reused and referenced freely.
2. Your product cannot use LLMs or “generative AI” in its text or images.
3. Art from our books may not be used or republished unless you have explicit permission from the designers or artists who created it or Haunted Table, LLC. You may use the art in the *Third Party Licensed Asset Pack* if your work adheres to the rest of this license AND you include the attribution noted in the Third Party Licensed Asset Pack section.
4. Text from our books (including translations) may not be used or republished unless you have explicit permission from the author or Haunted Table, LLC. You may use the names of organizations, creatures, locations, and entities of the game world as well as the Triangle Agency organization name.
5. Your product cannot use the Triangle Agency logo or Haunted Table logo unless you have explicit permission from Haunted Table, LLC. You may (but are not required to) use the included Triangle Agency compatibility logo.
6. You may not give the impression that your creation is an official Triangle Agency or Haunted Table, LLC product or that it is endorsed or sponsored by Haunted Table, LLC in any way. Haunted Table, LLC and the designers and artists of Triangle Agency take no responsibility for any legal claims against your product. Any legal disputes, controversies, or claims related to this license shall be governed by and construed in accordance with the laws of The United States of America and settled in a US court.
7. The following text must be included visibly in the front matter of your product or publication and on any website or storefront where you promote it:

[Product name] is an independent production by [author or publisher] and is not affiliated with Triangle Agency or Haunted Table, LLC. It is published under the Triangle Agency Third Party License.
9. This copyright text must be included legibly somewhere in the product and on any product listing or storefront:

Triangle Agency is copyright Haunted Table, LLC.

If you follow these terms, you don't owe us anything, but we'd love a copy so we can read it (and potentially feature it in our monthly Community Spotlight on [Patreon](#))! Additionally, if you're an experienced designer interested in working with us directly on Triangle Agency material, email us at any stage of development. If we think it's a good fit, we'll see how we can help!

This license covers:

Game materials/supplements (such as missions, character sheets, or ARC pieces) and entertainment based on the game being played (such as actual play podcasts or streams).

It doesn't cover:

Other adaptive media (such as film, T.V., or novelizations), which require explicit, separate permission from Haunted Table, LLC. Reach out at team@hauntedtable.games if you're unsure.

Some FAQs

Do I need to credit you if I'm using similar/derivative/inspired mechanics?

In our opinion, this is part of the process of making any kind of art-- so, no. As long as you aren't using our direct copyrighted material (meaning you aren't plagiarizing our work by taking or paraphrasing our words) you don't need to credit us directly. But if you're worried enough about it to be unsure, it's nice to give us a nod!

Can I translate the book, or parts of the book?

Translating for personal use at your table is fine. Translations may not be distributed, for free or commercially, without explicit permission from Haunted Table, LLC. You may not put any part of the text into an LLM or “AI” as part of the translation process (or for any other reason).

I have other questions!

Reach out via email (team@hauntedtable.games) or at discord.hauntedtable.games!

Asset Pack

Compatibility Logo

The optional Compability Logo, included in SVG and multiple colors of PNG. It may be recolored.

Document Template

A template and guide for laying out Triangle Agency documents by [Ben Mansky](#), included in INDD and IDML formats. More information and a preview can be found in the next section of this document.

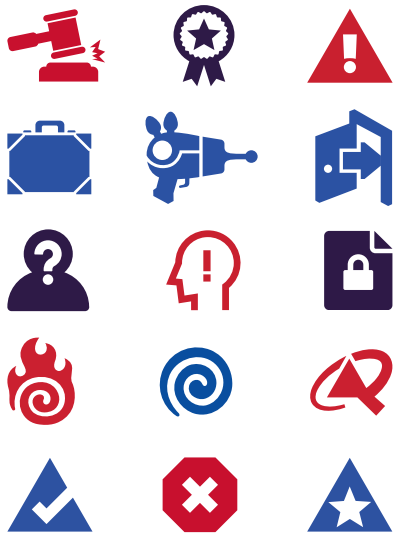

Template Attribution

If you use these templates, please include the following attribution in your product:

Layout based on a template by Ben Mansky.

Icons

Many commonly-used icons (including, but not limited to, those below) by [Michael Shillingburg](#), included in PNG and SVG formats. These may be recolored and remixed.

Icon Attribution

If you use any icons, even if they've been recolored or remixed, you must include the following attribution in your product:

Triangle Agency icons by Michael Shillingburg, licensed under the Third Party Publishing License.

Style Guide & Templates

Fonts

The two main fonts used in Triangle Agency are Articulat CF and **Avant Garde**.

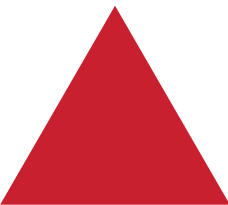

Articulat CF is by Connary Fagen, whose work you can find at connary.com.

Avant Garde is an old font with many (basically identical) variants available for license in lots of places online.

Both fonts are also available as Adobe fonts.

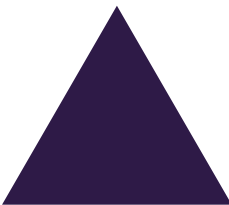

If you're looking for a free alternative, the Google Fonts Roboto and **Poppins** have a similar feel (and are what we use on our itch.io pages.)

Layout

Agency Template

The following pages are a preview of the included template by [Ben Mansky](#), one of Triangle Agency's primary layout artists. It was originally developed for internal use on the Haunted Table Patreon. This document was laid out in it! Thank you, Ben!

Vault Template

The Vault template in this document is based on the layout of the Vault, which wouldn't have been possible without the involvement of [Clint Skene](#).

Agency Template Preview

- There are several steps to successfully using this template. They are:
- ▶ Look over it. There's four pages here covering generic Agency documents, and another couple of pages for styling Missions.
 - ▶ Get acquainted with Paragraph Styles. There's one h1 style for the title page of all documents, then a set of subheadings & bullets for Agency Styles and another set for Mission Styles.
 - ▶ Less necessary, but nice to get acquainted with Character Styles. These are used to modify the appearance of bullets, and there's separate ones for triangular Agency Doc bullets, triangular Mission bullets, and the line/circle bullets that appear in Missions.
 - ▶ Decide if you want to use a two-column layout, a one-column layout, or a mixture.
- As an exercise, identify what Paragraph Style appears at the top of this page. More info on columns and spans can be found in the Mission section of this template.
- Sometimes you'll want a subheading within an Agency document. Those (h3) look like this:
- ## A new section
- They're pretty nice. If you want to swap colors or modify spacing without changing every instance of a given heading, just select the text and change it as you normally would. If you'd rather change every subheading in the whole document, edit the Paragraph Style.
- Bullets are harder to modify in that way, but it's totally doable. To change bullet color, you can individually modify a list by selecting the text and going to Bullets and Numbering Options in Properties. Or you can create a new Character Style and apply it to a new Paragraph Style. For example, I've made a **red** triangular bullet style.
- ▶ Here is an example. To get this, I created the Character Style "AgencyBullet_Red," and applied it to the bullet in the new Paragraph Style, "Bullets - Red Triangles."
 - ▶ InDesign is not very user friendly.

Sometimes, you'll want to make a Callout

Callouts (h4) use a heading style based on h3 (subheadings), but with shading behind them. The text in this box is the same as the body text, but with a style applied to generate a border. Note that the shading comes from the heading style (h4) and the border comes from the text style. Changing the colors on Callout styles is also possible: as with bullets, you'll go to the Shading and Border options under the Paragraph menu and adjust individually. Otherwise, make new styles as needed, based on these. Why use styles instead of drawing boxes on the page? Well, they adjust size and shading automatically as you type, and their aesthetic additions get (mostly) passed over by accessibility software.

One more thing

If the pages are feeling too crowded to you, or if full-width text boxes feel way too wide, make use of just 5 of the 6 columns in the baseline grid. You can save one column for sidebars, comments, graphical tweaks, or just very very generous margins.

Tables of Various Sorts

There may be need for tables, both large and small. Managing tables in InDesign (and keeping them accessible) is not a straightforward task, but this guidance should make it a little easier. Tables don't generally vary in color by mission, so we'll stick with one base table style.

Creating a table has three main steps, give or take:

- First, define the text you want to go in the table, separating columns with tabs and rows with line breaks (enter/return).
- Next, select the text and in the Table dropdown, choose "Convert Text to Table." Use the Table Style "Table - Agency."
- Last, adjust aesthetics manually using objects on the Frame layer of this document, which will live behind the content of the table, since it's the bottom layer.

But why take this roundabout approach to table aesthetics? InDesign has fairly limited table tools, especially when a screen reader is involved. As an example, you cannot make real rounded corners on a table. You can paste a table into a rounded text frame, but this creates a strange nested object.

Not all aesthetic changes need to be made in this way. Some are baked into the table functionality in InDesign. You can figure out a way to do most of these with table tools, but we suggest:

Adjust Manually

- Colors and shading behind cells in a table
- Outer outlines and borders
- Icons and images (adding alt text where needed)

Use Table Tools

- Headers (apply the "Header" Cell Style to the first row)
- Inner borders and lines
- Merging, splitting, or altering sizes of cells

Thing	Pro	Con
Flower	Pretty	Allergies
Dog	Adorable	Messy
Noodle	Delicious	Slippery
Commendation	Morally Correct	None :)

But Wait!

To ensure screen readers ignore the aesthetic frames behind the table, best practice is to tag them as Artifacts so accessibility programs know to ignore them.

Example	Table
Without	Headers
These	Tables
Are	How
I	Buy
My	House
They	Keep
My	House
Hot	Etc.

VAULT TEMPLATE PREVIEW

The h2 - Mission Section Heading style can be used to denote the start of an important section of a mission. It may be followed by a full-width text box like this one, or by a two-column text box like the one below. It will span columns. Two lines of space (0.325 in) between blocks of text is ideal.

A Scene Heading

The h3 - Mission Scene Heading style can divide a mission with long sections into more palatable subsections. It is perhaps the least necessary heading in the Mission Headings hierarchy. It uses the same color as the sidebars (the swatch titled Theme Color 1).

As missions grow shorter, we hope that no section is so long that it requires a heading like this one. Instead, h4 - Mission Scene Subheading may be used to define scenes within the context of a mission.

A Subheading for Scenes

For the general body of missions, h4 - Mission Scene Subheading is most commonly used. It is the same color as the backdrop behind the page numbers, and is defined by the swatch Theme Color 2. It can easily fit within single columns, and should not be used to span multiple columns.

Another Scene, and Lists

When you do have multiple subheadings within the same block of text, it is a good idea to increase the space between paragraphs to further accentuate the new heading. Here, about one line of space (0.1625in) is sufficient.

These sections may contain lists of various types. These are usually represented as bulleted lists or line lists. Bulleted lists are relatively simple, and use a Theme Color 1 triangle.

- A bulleted list looks like this.
- It is nice and easy to use.
- Ideally, neither a bulleted list nor a line list should cross columns, but as long as no individual point is split, it's ok.

When possible, sentences shouldn't span columns, but scenes can span just fine. Just keep in mind that if there are two blocks of text with two columns each stacked on top of each other, there could be a little bit of confusion whether to read vertically or across the page. As long as there's plenty of space between the blocks, it should stay readable.

Line lists look like this:

- These lists use a Character Style that applies a 2pt border of Theme Color 1 around a white Wingdings circle.
- Why do this instead of just pasting a circle in manually?
- You don't have to worry about alignment, and it's more screen reader friendly.
- We like to use this style of list when covering a sequence of connected ideas, or showing pieces of information you might get from a single subject.

So in summary, these are all the main parts of mission layout. All you need to do is change the Theme Color swatches to your desired colors, apply Paragraph Styles, and you're all set.
